The report requires updating with new data and is sent in 48 hours after order is placed.

A biomass briquette machine is a device used to compress biomass raw materials (such as agricultural waste, forestry byproducts, urban organic waste, etc.) into fuel blocks or feed blocks of a certain shape and size. These fuel blocks are usually called biomass fuel or biomass pellets, and they can be used for heating, power generation or as industrial fuel. The briquette machine mechanically compresses the biomass raw materials to remove part of the moisture, increase its calorific value, and facilitate storage and transportation.

The global Biomass Briquetting Machine market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
