The global Biomass Plastic market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Biomass plastic is a polymeric material chemically or biologically synthesized from renewable biomass resources. In other words, the raw material of biomass plastic is plant material that grows through photosynthesis using carbon dioxide.

Therefore, even if biomass plastics are incinerated and emit carbon dioxide, the total amount of carbon dioxide absorbed during growth and the total amount of carbon dioxide emitted during incineration is plus or minus zero, making them highly carbon neutral. Biomass plastics can be biodegradable or non-biodegradable.

Although not necessarily biodegradable, they are known as environmentally friendly plastics due to their carbon neutrality. Since there are various raw materials, chemical structures, manufacturing methods, and functions, it is important to understand the characteristics of each material before using the appropriate one.

United States market for Biomass Plastic is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Biomass Plastic is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

Europe market for Biomass Plastic is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
