According to our LPI (LP Information) latest study, the global Biomass Silica Filler market size was valued at US\$ 479.1 million in 2022. With growing demand in downstream market, the Biomass Silica Filler is forecast to a readjusted size of US\$ 889.1 million by 2029 with a CAGR of 9.2% during review period.

The research report highlights the growth potential of the global Biomass Silica Filler market. Biomass Silica Filler are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Biomass Silica Filler. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Biomass Silica Filler market.

Silica is the key-ingredient for fuel-efficient tires, reducing the fuel consumption by up to eight percent compared to conventional passenger car tires. With the sustainable biomass silica a next step will be taken to reduce the carbon footprint of the silica significantly. The silicate, which is the essential raw material to produce the tire silica will be biobased and made with green energy. The demand for sustainable raw materials in tires is increasing significantly. However, until now only very small quantities of biobased silica are available in the market, which do not meet the rising global demand.
