The global Biometric Systems market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Biometrics is the science and technology of measuring and statistically analyzing biological data. In information technology, biometrics usually refers to technologies for measuring and analyzing human body characteristics such as fingerprints, eye retinas and irises, voice patterns, facial patterns, and hand measurements, especially for authentication purposes.

A biometric system is a technological system that uses information about a person (or other biological organism) to identify that person. Biometric systems rely on specific data about unique biological traits in order to work effectively. A biometric system will involve running data through algorithms for a particular result, usually related to a positive identification of a user or other individual.

In US?Biometric Systems key players include Apple?AuthenTec?, Synaptics, Morpho Safran Group, HID Global Corporation, NEC, etc. The top five manufacturers hold a share over 80%.

In terms of product, Fingerprint Identification is the largest segment, with a share over 90%. And in terms of application, the largest application is Consumer electronics, followed by Biometric equipment, etc.
