## Abstracts

The global Bionic Robot Pets market size is predicted to grow from US\$ 317 million in 2025 to US\$ 816 million in 2032; it is expected to grow at a CAGR of 14.7% from 2026 to 2032.

Bionic Robot Pets are robotic animals designed to mimic the appearance, behavior, and movements of real pets using advanced robotics, artificial intelligence (AI), and sensors. These pets provide companionship, emotional support, and therapeutic benefits without the need for the maintenance and care that living animals require. Bionic robot pets are often used in settings like elderly care, therapy, and homes where keeping real pets might not be practical.

Bionic robotic pets are increasingly used as emotional companionship tools for seniors and those living alone, particularly in alleviating loneliness.

Technological advances (such as touch response, AI interaction, and facial/voice recognition) are significantly enhancing user experience and emotional connection.

Product forms range from traditional stuffed robots to lifelike walking cat and dog robots, catering to a variety of age groups.

Market Growth in Emerging Economies: Emerging economies in Asia Pacific, Latin America, and Africa demonstrate significant potential in the bionic robotic pet market. With rising disposable incomes and increased awareness of these innovative products, more consumers in these regions are interested in purchasing bionic robotic pets for entertainment and companionship. For example, in China, the market for bionic robotic pets is rapidly expanding due to the development of e-commerce and a growing tech-savvy population.

Despite this enormous potential, privacy, security, and social and ethical considerations (such as surrogate relationships in elderly care) need to be addressed and regulated.
