The pungent taste in black pepper and long pepper is due to the alkaloid commonly known as piperine. Piperine, also known as Bioperine, is extracted from long pepper and black pepper using dichloromethane. Generally, a typical black pepper contains 5-10% piperine while a long pepper contains around 1-2% piperine. Bioperine, trademark name of piperine, is the active ingredient in long & black peppers, which contributes to the unique spice or taste. Piperine greatly increases the level of absorption of nutrients such Vitamin C, Vitamin A, Vitamin B6, selenium, beta-carotene, etc. within the body.
