Biopolymers are the biodegradable polymers made of starch, sugar, cellulose and many more. Biopolymers coating in the packaging retard unwanted moisture transfer in food products, are good oxygen and oil barriers, are biodegradable, and have potential to replace current synthetic paper and paperboard coatings. Biopolymer-based materials have gathered attention from packaging industry due to rising concerns in recent years from environmental as well as economic perspectives of traditional petroleum-based polymers. Pharmaceutical industry has seen a lot of regulatory action to raise the bar for packaging of products. It accounts for potential machines for 100% non-destructive inspection of seal integrity.
