A Biopsy Cannula is a medical device used in diagnostic procedures to extract tissue samples from the body for further examination. It is a tubular instrument typically made of stainless steel or other materials that are compatible with the human body. The biopsy cannula is designed with a sharp cutting edge or a needle-like tip, allowing it to be inserted into the desired tissue site. Once inserted, it can be rotated or advanced to collect a small sample of tissue, which can then be analyzed under a microscope to aid in the diagnosis of various medical conditions, such as cancer or infections.

The global Biopsy Cannula market size is projected to grow from US\$ million in 2023 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
