The global Biorepository Storage Service market size is predicted to grow from US\$ 702 million in 2025 to US\$ 1339 million in 2032; it is expected to grow at a CAGR of 9.8% from 2026 to 2032.

Biorepository Storage Service refers to professional services that provide storage, temperature-controlled preservation, inventory management, and quality assurance for biospecimens used in life science research, clinical trials, medical testing, biopharmaceutical development, and biobank operations. The service typically covers blood, serum, plasma, urine, saliva, tissue, cells, nucleic acids, microbial samples, and other clinical or research specimens. By using different storage conditions such as ambient, refrigerated, frozen, ultra-low temperature, or liquid nitrogen storage, together with processes including sample receipt, labeling, aliquoting, accessioning, retrieval, logistics coordination, environmental monitoring, information tracking, and compliance documentation, the service helps ensure sample stability, traceability, and usability throughout the storage period.

Biorepository Storage Service is a fundamental enabling service in life science research, clinical trials, precision medicine, and biopharmaceutical development. Market demand is mainly driven by the growing need of pharmaceutical companies, CROs, medical institutions, research institutes, diagnostic companies, and biobanks for long-term sample stability, standardized management, and compliant traceability. With the development of multicenter clinical studies, translational medicine, genetic testing, companion diagnostics, and real-world research, biospecimens are becoming more diverse, larger in volume, and more closely linked to clinical and research data. This raises higher requirements for temperature control, sample integrity, information management, quality systems, and cross-regional service capabilities. Overall, the

market is evolving from basic frozen storage toward integrated biospecimen management services covering sample receipt, processing, aliquoting, cryopreservation, inventory management, quality control, data management, and regulatory support. Professional service providers with standardized operations and long-term service experience are better positioned to gain recognition from pharmaceutical and clinical research customers.
