The global Bioresorbable Metals Cardiovascular Stents market size is predicted to grow from US\$ 1062 million in 2025 to US\$ 1924 million in 2032; it is expected to grow at a CAGR of 9.0% from 2026 to 2032.

Bioresorbable Metals Cardiovascular Stents are advanced medical devices made of biodegradable metal materials designed to provide temporary physical support for coronary artery lesions. Over time, these stents will be gradually absorbed by the body after completing their functions, avoiding late complications that may be caused by the long-term retention of traditional metal stents, such as stent thrombosis and restenosis. The ultimate goal of such a stent is to promote natural healing of the vessel and return the vessel to a state more similar to its natural state without the stent, thereby reducing long-term risk for the patient and improving quality of life.

United States market for Bioresorbable Metals Cardiovascular Stents is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Bioresorbable Metals Cardiovascular Stents is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
