BIOS firmware is software that is fixed in the storage chip of the computing device motherboard. It is the first startup program when the computing device is turned on and is the 'bridge' for communication between software and hardware. For the lower-level hardware, BIOS firmware provides the lowest-level and most direct hardware settings and control for the computing device; for the upper-level operating system, BIOS firmware implements its boot and startup. BIOS firmware is a key link in realizing the functions of computing devices and a basic link in ensuring the security and reliability of computing devices. Like the processor and operating system, it is the core key software and hardware of computing devices.

The global BIOS Firmware market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
