The global Biosafety Service market size is predicted to grow from US\$ 145 million in 2025 to US\$ 209 million in 2032; it is expected to grow at a CAGR of 5.6% from 2026 to 2032.

Biosafety Service is a systematic professional service designed to prevent, control, and respond to the risks of leaks, infections, and malicious misuse of pathogens, genetically modified organisms, and other harmful biological agents in laboratories, medical facilities, biotechnology production facilities, and the environment. It establishes multi-layered barriers through the construction of physical protective facilities, the development of rigorous operating procedures, personnel training, risk assessment and auditing, the implementation of emergency response plans, and waste sterilization. Its core objectives are to protect human health, safeguard the ecological environment, and ensure the reliability of research and production activities; it is the cornerstone of responsible research and industrialization in the life sciences.

The Biosafety Service industry chain consists of upstream equipment/consumable suppliers and downstream end-users such as laboratories, pharmaceutical companies, and medical institutions. Global prices vary significantly; the design and consulting fee for a single BSL-3 laboratory is approximately US\$50,000 to US\$300,000, while the total cost of a complete construction and certification project can reach millions to tens of millions of US dollars. Costs are highly concentrated in the professional construction of high-level cleanroom engineering, the manpower and knowledge of senior experts, and continuous equipment validation and maintenance. The industry has a high gross profit margin, with consulting and certification services reaching 50%-70%, while projects involving a large amount of engineering hardware have a relatively lower gross profit margin (approximately 20-40%). Its profitability relies on top-tier professional

qualifications, a successful project portfolio, and a deep understanding and implementation capability of global or regional regulations (such as WHO standards and ISO 35001).

United States market for Biosafety Service is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
