According to our LPI (LP Information) latest study, the global Biosensors market size was valued at US\$ 11680 million in 2023. With growing demand in downstream market, the Biosensors is forecast to a readjusted size of US\$ 21100 million by 2030 with a CAGR of 8.8% during review period.

The research report highlights the growth potential of the global Biosensors market. Biosensors are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Biosensors. Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Biosensors market.

A biosensor is an analytical device, used for the detection of an analyte, it combines a biological component with a physicochemical detector. The sensitive biological element (e.g. tissue, microorganisms, organelles, cell receptors, enzymes, antibodies, nucleic acids, etc.) is a biologically derived material or biomimetic component that interacts (binds or recognizes) with the analyte under study. The biologically sensitive elements can also be created by biological engineering. The transducer or the detector element (works in a physicochemical way; optical, piezoelectric, electrochemical, etc.) transforms the signal resulting from the interaction of the analyte with the biological element into another signal (i.e., transduces) that can be more easily measured and quantified. The biosensor reader device with the associated electronics or signal processors that are primarily responsible for the display of the results in a user-friendly way. This sometimes accounts for the most expensive part of the sensor device however it is possible to generate a user friendly display that includes transducer and

sensitive element (holographic sensor). The readers are usually custom-designed and manufactured to suit the different working principles of biosensors.

The Biosensors industry can be broken down into several segments, Non-wearable Biosensor, Wearable Biosensor, Others, etc.

Global biosensors main manufacturers include Abbott, Dexcom, Medtronic and Ascensia Diabetes Care, totally accounting for about 60% of the market.
