The global Biosimilar and Interchangeable Biologics market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A biosimilar (also known as follow-on biologic or subsequent entry biologic) is a biologic medical product that is almost an identical copy of an original product that manufactured by a different company. Biosimilar are officially approved versions of original ?innovator? products and can manufactured when the original product's patent expires. Reference to the innovator product is an integral component of the approval. An interchangeable biosimilar is a biosimilar that meets additional requirements outlined by the law that allows for the FDA to approve biosimilar and interchangeable biosimilar medications. An interchangeable biosimilar product may be substituted for the original product without consulting the prescriber, much like how generic drugs are routinely substituted for brand name drugs.
