According to this study, the global Biosolids Recycling Management Service market size will reach US\$ 2542 million by 2031.

Biosolids Recycling Management Service refers to the comprehensive process of handling, treating, and repurposing biosolids—organic byproducts generated from municipal or industrial wastewater treatment—in a safe, sustainable, and regulatory-compliant manner. This service encompasses various stages, including the stabilization, dewatering, transportation, and beneficial reuse or disposal of biosolids. A core focus of biosolids recycling is the transformation of waste into valuable resources, such as nutrient-rich fertilizers, soil amendments, or renewable energy through composting, land application, or anaerobic digestion. By recovering nutrients and reducing landfill dependence, biosolids recycling management plays a critical role in promoting circular economy principles, supporting agricultural productivity, and contributing to environmental sustainability goals.
