The global Bipolar Motor Drivers market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A Bipolar Motor Driver is a type of motor driver used to drive bipolar (also known as bidirectional) DC motors. Bipolar motors typically have two coils (also called phases), each with two polarities, positive and negative. The function of the bipolar motor driver is to control the current of the two coils of the motor according to the control signal, thereby controlling the steering and speed of the motor. Bipolar motor drivers are often used in applications that require control of the motor's direction of rotation and speed, such as robotics, automation equipment, automotive, marine, etc. It can control the movement of the motor by changing the direction and magnitude of the current, and realize functions such as forward rotation, reverse rotation, stop and speed regulation. Different bipolar motor drivers have different control methods, such as pulse width modulation (PWM) control, DC voltage control (H-bridge), etc.

United States market for Bipolar Motor Drivers is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Bipolar Motor Drivers is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
