The global Bipolar Plate Leak Test Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Bipolar plate leak tester is a device used to test the air tightness of battery bipolar plates. The battery bipolar plate is an important part of the battery, and its air tightness has an important impact on the performance and life of the battery. The bipolar plate leak test machine puts the battery bipolar plate to be tested into a closed test chamber by applying a certain pressure or negative pressure to observe whether there is gas leakage. If the battery bipolar plates have air tightness problems, such as gas leakage or leakage, the leak tester will detect the gas leakage and prompt by alarm or indicator light. Bipolar plate leak testers usually use the pressure difference method for testing, that is, applying a certain pressure or negative pressure in the leak test chamber, and judging the air tightness of the battery bipolar plate by measuring the pressure change or gas flow in the leak test chamber. Some advanced bipolar plate leak test machines can also perform automated testing and have data recording and analysis functions for quality control and failure analysis. The bipolar plate leak tester plays an important role in the battery manufacturing and quality inspection process. It can help ensure the airtightness of the battery's bipolar plates and improve the performance and reliability of the battery.
