The global Bipolar Power Supply market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

The bipolar power supply is a power supply that can provide positive and negative voltage outputs. It often uses a combination of multiple unipolar power supplies or a unipolar power supply and an inverter circuit. Inside the power supply, the capacitor is charged to a very high voltage and then quickly discharged through an electronic switch to produce a very high single pulse. This pulse can reach the peak voltage within a few microseconds and lasts for a very short time. Bipolar power supplies have high energy density, high efficiency, simple circuits, small size, and light weight. They are widely used in electronic products, audio equipment, medical equipment, communications, energy, and scientific research.

United States market for Bipolar Power Supply is estimated to increase from US\$ million in 2025 to US\$ million by 2032, at a CAGR of % from 2026 through 2032.
