The global Birch Sap Powder market size is predicted to grow from US\$ 24.76 million in 2025 to US\$ 38.15 million in 2032; it is expected to grow at a CAGR of 7.5% from 2026 to 2032.

Birch Sap Powder is a dried, water-soluble ingredient made by collecting birch sap (birch water or juice) tapped from birch trees and then concentrating and drying it to preserve a portion of the sap's naturally occurring sugars, minerals, organic acids and other soluble components in a stable powder form. Birch sap itself is the clear, slightly sweet sap tapped from birch trees and has long been used as a beverage in some regions.

Upstream inputs include birch sap harvesting (typically in early spring during a short tapping window), raw sap collection logistics (hygiene, filtration), concentration, and drying aids or carriers (commonly used for spray-dried powders), plus food/cosmetic-grade packaging. Downstream, the powder is sold to manufacturers of functional beverages and drink mixes, dietary supplements/nutraceuticals, and personal care/cosmetics.

In 2025, global sales of Birch Sap Powder reached approximately 460 tons, with an average global market price of around US\$ 55/kg. The gross profit margin is approximately 20%-40%.
