The global Bismuth Telluride Bar market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

Bismuth telluride (Bi_2Te_3) is a compound that is commonly used in the production of thermoelectric materials and devices. Thermoelectric materials have the unique property of converting temperature differences into electrical voltage and vice versa. Bismuth telluride is particularly important in the development of thermoelectric generators and coolers, and it is often used in the form of a bar or pellet.

A bismuth telluride bar, also known as a thermoelectric bar or pellet, is a small, solid piece of bismuth telluride material that is designed to efficiently generate electricity when there is a temperature gradient across it. It can also be used for cooling applications, where it absorbs heat when an electrical current is applied to it. This phenomenon is known as the Peltier effect.

Bismuth telluride bars are used in various applications, including portable thermoelectric generators for power generation in remote areas or for harvesting waste heat in industrial processes. They are also used in thermoelectric coolers for applications like electronic component cooling or in refrigeration devices where a compact and efficient cooling solution is required.

The unique properties of bismuth telluride make it a valuable material for thermoelectric applications, and its use in the form of bars or pellets allows for flexibility in designing thermoelectric systems for specific requirements.
