Abstracts

The global Bismuth-Zinc Catalyst market size is predicted to grow from US\$ 129 million in 2025 to US\$ 173 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

Bismuth-Zinc Catalyst is a highly efficient and environmentally friendly bimetallic catalyst composed of zinc and bismuth. In applications such as polyurethane synthesis, bismuth and zinc exhibit a synergistic effect: organic bismuth primarily provides the necessary speed and selectivity for the initial gelation and curing process, while organic zinc focuses on accelerating the cross-linking process in the later stages of the reaction, thereby achieving precise control over the curing process. The core advantage of this catalyst lies in its ability to effectively replace traditional toxic catalysts such as lead, mercury, and tin, meeting increasingly stringent environmental regulations.
