The global Bisoprolol and Amlodipine Tablets market size is predicted to grow from US\$ 44.02 million in 2025 to US\$ 118 million in 2032; it is expected to grow at a CAGR of 7.6% from 2026 to 2032.

Bisoprolol and Amlodipine Tablets are a combination oral antihypertensive medication primarily used to treat hypertension and related cardiovascular diseases. This drug combines bisoprolol (a selective β -1 receptor blocker) and amlodipine (a calcium channel blocker), exerting a dual mechanism of action to lower blood pressure. Bisoprolol works by blocking β -1 receptors, slowing the heart rate, and reducing the heart's workload, thereby lowering blood pressure. Amlodipine, on the other hand, inhibits the entry of calcium ions into the heart and smooth muscle cells, causing vasodilation and further lowering blood pressure. This combination formulation has good tolerability and improves patient adherence to treatment, making it particularly suitable for hypertensive patients who require combination therapy. In 2025, global bisoprolol amlodipine tablets production reached approximately 120 million units.

Bisoprolol and Amlodipine Tablets, as a combination antihypertensive medication, play a significant role in the global market for hypertension and cardiovascular diseases. Hypertension is a major risk factor for cardiovascular diseases such as coronary artery disease, stroke, and heart failure. With the aging global population and changing lifestyles, the number of hypertension patients is steadily increasing, and market demand continues to grow. Bisoprolol and Amlodipine Tablets combine the benefits of a β -1 receptor blocker and a calcium channel blocker, effectively controlling blood pressure through a dual mechanism, reducing cardiac workload, and improving cardiovascular health. The market potential of this drug lies not only in its efficient blood pressure-lowering effects but also in the advantages of its combination formulation,

which simplifies the patient's treatment regimen and enhances medication adherence. It offers a convenient and effective treatment option, particularly for hypertensive patients requiring combination therapy. As health management concepts gain traction and patients seek more convenient treatment options, the market for combination antihypertensive medications is steadily growing.
