The global Bisphenol-A market size is predicted to grow from US\$ 10473 million in 2025 to US\$ 14669 million in 2032; it is expected to grow at a CAGR of 5.3% from 2026 to 2032.

Bisphenol-A (BPA, CAS 80-05-7) is a major bulk organic chemical intermediate, typically produced by the condensation of phenol and acetone under acidic catalytic conditions. It is generally supplied as white flakes, prills, granules or crystalline solids. BPA is primarily used as a key building block for polycarbonate (PC) and epoxy resins. In 2025, Global Bisphenol-A sales is estimated at 10,100 Kilotons, with an average ex-works price of around 1,060 US\$/Ton.

The Bisphenol-A value chain starts from benzene, propylene, cumene, phenol and acetone; Bisphenol-A is then produced through phenol-acetone condensation and mainly consumed in polycarbonate and epoxy resins, which are further used in electrical and electronics, automotive, construction, anti-corrosion coatings, copper-clad laminates, adhesives and composites.

The Bisphenol-A market is mainly driven by two downstream demand pillars: polycarbonate and epoxy resins. PC remains difficult to replace in electric vehicles, automotive lighting, charging infrastructure, electrical and electronic housings, optical materials, medical components and home-appliance structural parts due to its transparency, impact resistance, heat resistance and dimensional stability. Epoxy resin demand is also expanding in wind turbine blades, electronic encapsulation, copper-clad laminates, anti-corrosion coatings, industrial adhesives and composites.
