Bispyrithione Magsulfex is an industrial antimicrobial/biocidal active (typically supplied as a stabilized salt/complex formulation) whose industry chain runs from upstream pyrithione-chemistry intermediates and metal salts (e.g., magnesium sources) plus solvents/dispersants, through midstream synthesis/neutralization and formulation into liquids/slurries/powders, to downstream use as a preservation and anti-microbial ingredient in products such as coatings/paints, adhesives/sealants, polymer emulsions, household/industrial cleaners, and other water-based formulations where in-can and dry-film protection is needed.

In 2025, global Bispyrithione Magsulfex production reached approximately 173 MT, with an average global market price of around US\$ 50.6 per kg. The global single-line production capacity ranges from 50 to 100 MT per year. The industry's gross profit margin is approximately 20%-25%.
