ChLCDs are typically reflective, meaning they do not require a backlight to be visible, which makes them highly energy-efficient. They are also bistable, meaning they can maintain an image without continuous power, only needing energy to change the display. Bistable Cholesteric Liquid Crystal Displays (ChLCDs) are a specific type of cholesteric LCD that can maintain an image without a continuous power supply. This bistability is a significant advantage, especially for applications where power consumption is a critical factor.
