## Abstracts

The global Black Oxide Service market size is predicted to grow from US$ 681 million in 2025 to US$ 1017 million in 2032; it is expected to grow at a CAGR of 6.0% from 2026 to 2032.

Black Oxide Service is an industrial finishing process that converts the surface of a ferrous metal (iron-based), copper, copper alloys, or powdered metal into a magnetite (Fe?O?) layer, which appears as a matte or satin black finish. Unlike plating or painting, which add a separate layer, black oxide is a conversion coating; it transforms the top layer of the metal itself through a chemical reaction. The process is also commonly known as blackening, bluing (when referring to a specific type used on firearms), or black passivation.

United States market for Black Oxide Service is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Black Oxide Service is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
