Tinplate, also known as tin-plated iron, is a common name for electroplated tin-plated steel sheet. The English abbreviation is SPTE.

As an important branch of the metal material industry, the tin-plated steel market presents a stable demand and a wide range of applications. Tin-plated steel is a material with a thin layer of tin plated on the surface of the steel plate. It has excellent corrosion resistance, weldability and surface gloss, making it widely used in food packaging, electronic products, automobile manufacturing and other fields. In the field of food packaging, tin-plated steel is often used in the manufacture of cans, cans and other containers to protect food from oxygen and moisture. In electronics manufacturing, tinplate is used to make electronic housings, connectors, and electronic components. The automotive industry also uses tin-plated steel for body parts and components, which improves corrosion resistance and structural strength. With the increasing focus on environmental protection and sustainable development, the market is also striving to develop more environmentally friendly tinplate processes and materials to meet increasingly stringent environmental standards. The tinplate market has a stable demand all over the world, and continues to innovate to meet the needs of different fields.
