Black silicon carbide for sandblasting is an industrial abrasive with extremely high hardness and excellent wear resistance. It is widely used in metal surface treatment, rust removal, deburring, roughening treatment and surface sandblasting of glass, ceramics and other materials. Black silicon carbide is made by high-temperature melting of quartz sand, petroleum coke and high-quality anthracite in a resistance furnace. Its sharp edges and high brittleness make it easier to break during the impact process to form new sharp-angle particles, improving cleaning efficiency and surface treatment quality. It is suitable for pollution-free sandblasting operations of high-demand workpieces such as stainless steel, non-ferrous metals, and precision molds.
