Bladder molded parts refer to components that are shaped through the process of bladder molding, which is widely used in the manufacturing of complex, lightweight, and high-strength parts, especially for industries such as automotive, aerospace, and medical devices. This method utilizes a flexible bladder (usually made of rubber or similar materials) that inflates to push a material, often composites or thermoplastics, against a mold to achieve the desired shape. The process is valued for its ability to produce intricate designs, reduce material waste, and create parts with enhanced performance characteristics like higher strength-to-weight ratios.
