Blade Film Coater is a kind of equipment used for coating thin films in laboratories and production lines. It evenly coats the coating on the surface of the substrate through a scraper to obtain a specific coating thickness and surface quality. The working principle of the scraper-type film coater is to place the paint evenly on the surface of the substrate, and then use a scraper to scrape it flat to form a coating with a specific thickness. The machine uses scrapers of different widths and shapes to achieve coatings of varying thickness and quality. The scraper type film coating machine is widely used in the coating and surface treatment process in the fields of coatings, paints, inks, glues, cosmetics and medical equipment.
