The global Blanket Aerogel market size is predicted to grow from US\$ 357 million in 2025 to US\$ 1148 million in 2031; it is expected to grow at a CAGR of 21.5% from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Aerogel is the lightest mesoporous solid material present on Earth. It is derived by the replacement of liquid component of gel with a gas. It comprises an interconnected nanostructure network with a minimum porosity of 50%. Aerogels are extremely porous and have low thermal conductivity that make them ideal insulation materials.

In general, aerogels are available in several forms such as blankets, particles/powders, panels, and blocks among others. Among all, blankets are the most commonly used form of aerogels, owing to its ease of handling. Blankets are formed with the combination of silica aerogels and flexible fibers. In case of piping insulations, blankets are convenient for wrapping oil refinery pipes with suitable sheets. The market for blanket aerogel have witnessed tremendous growth in the European region. Eco-friendly initiatives taken by the government and growing concerns about vehicle ambience are the significant factors driving the growth of the European blanket aerogels market. However, high cost of production has hampered the growth of the blanket aerogels market in Europe.
