The global Blazed Gratings market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

Blazed gratings are a type of diffraction grating that is designed to maximize the efficiency of light diffraction into a specific order, usually the first-order diffraction. Unlike regular diffraction gratings, which have grooves with a symmetric profile, blazed gratings have grooves with an asymmetric, sawtooth-like profile. This unique structure directs most of the diffracted light into a preferred direction, typically enhancing the performance of optical systems where high efficiency is needed.
