The global BLE Module market size is predicted to grow from US\$ million in 2025 to US\$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Ongoing improvements with Bluetooth Low Energy (BLE) combined with low cost chips and a large and growing developer community have made BLE a leading Internet of Things (IoT) technology. Billions of BLE enabled smartphones has created a massively scaled ecosystem for IoT developers. BLE is driving markets such as health and fitness wearable sensors where low power and 1 MB/s throughput is required. The expanded network range, throughput and capacity with Bluetooth 5 as well as the completion of the Bluetooth mesh specification has also made BLE a disruptor for fixed sensor networks.

The accelerated growth of IoT market is one of the major factors driving the global BLE module market. IoT is concerned with capturing data from the surrounding stimuli and allowing communication between people and machines. The increasing focus on the connected environment has resulted in IoT becoming one of the most rapidly growing markets. IoT devices collect data through sensors and actuators and transmit it to a centralized location on a real-time basis. This allows end-users to make informed decisions. APAC accounted for the largest share of the BLE module market in 2017. According to Technavio's market research analysts, this regional segment is likely to continue its dominance in the market throughout the forecast period.
