A Blind Nut is an embedded type of nut that can be used to make threaded holes in a thin plate.

Normally, when installing threaded holes, the base material must be thicker than the depth of the threaded holes, because the base material is machined using a tap or other tool. Blind Nuts, on the other hand, can be used to make threaded holes in thin plate parts.

Blind Nut is a nut with a female thread inside that is press-fitted into the base material like a rivet. Threaded holes can be installed in thin plates and pipes where female threads cannot be drilled using a tap, thus expanding the range of assembly of thin components.

The global Blind Nut market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of %from 2024 to 2030.
