The research report highlights the growth potential of the global Blind Spot Monitor (BSM) market. Blind Spot Monitor (BSM) are expected to show stable growth in the future market. However, product differentiation, reducing costs, and supply chain optimization remain crucial for the widespread adoption of Blind Spot Monitor (BSM). Market players need to invest in research and development, forge strategic partnerships, and align their offerings with evolving consumer preferences to capitalize on the immense opportunities presented by the Blind Spot Monitor (BSM) market.

Blind Spot Monitor (BSM) system is a sensor based detection system implemented in automobiles that is used for monitoring vehicles at the rear and side of the driver/vehicle. Such systems generate tactile, audible, vibrating or visual form of warnings.

Growing consumer desire for improved safety features has led to a surge in demand for automotive blind spot detection systems. The demand for these systems is expected to increase during the forecast period due to the increasing number of traffic accidents globally. Rising disposable income and changing consumer preference to purchase vehicles with BSD rather than wide rear view mirrors have increased the demand for BSD technology. The combination of blind spot technology and ADAS technology is

becoming more and more popular among consumers because the system automatically avoids obstacles. BSD works with RADAR technology to keep vehicles in the same lane and prevent vehicles from drifting out of the lane. Additionally, sales of vehicles equipped with such features due to consumer preference are expected to drive market growth.
