The global Blind Stitch Machine market size is predicted to grow from US\$ million in 2025 to US\$ million in 2032; it is expected to grow at a CAGR of % from 2026 to 2032.

A blind stitch machine is a special type of sewing machine used to sew fabric, also known as a blind stitch machine or hidden stitch machine. It is mainly used to make hidden seams or invisible seams in clothing, such as the hems of pants, the hems of skirts, etc. This kind of machine can sew on the inside of the fabric, making the stitches less visible to the outside world, thereby achieving a beautiful and neat effect. The working principle of a blind stitch machine is to stack two or more layers of fabric together and then sew on the inside so that the seams only appear on the inside of the fabric and no seams are visible on the outside. This kind of machine is usually equipped with a specialized sewing needle and sewing mechanism, which can achieve precise sewing operations and ensure the firmness and beauty of the stitches. Blind sewing machines play an important role in the garment manufacturing industry and can improve the overall quality and appearance of products. They are usually used on large-scale production lines, but there are also some portable or home models suitable for individual workshops or home use.
