Abstracts

The global Block-switchable Dual-port RAM market size is predicted to grow from US$ 110 million in 2025 to US$ 148 million in 2032; it is expected to grow at a CAGR of 4.3% from 2026 to 2032.

In 2024, global production of switchable dual-port RAM will reach 5.317 million units, with an average selling price of $20.39 per unit.

DBRAM is a memory module designed based on a dual-port random access memory architecture. Its core feature is the flexible switching of storage blocks and port functions through a dynamic configuration mechanism. This architecture includes two independent read and write ports (Port A and Port B), each with independent address bus, data bus, and control signals, enabling parallel access to different memory cells.

The upstream of the storage block switchable dual-port RAM is semiconductor materials and core design, represented by SUMCO, Shin-Etsu Chemical, ASML, Cadence, Synopsys, etc.; the midstream is wafer manufacturing and packaging testing (TSMC, GlobalFoundries, UMC, ASE, Amkor, Changdian Technology, etc.), covering storage block architecture design, dual-port RAM logic unit layout, switchable control module integration and other process links; the downstream is consumer electronics (smartphones, tablets, wearable devices), communication equipment (5G base stations, data center switches), automotive electronics (smart cockpits, autonomous driving domain controllers), industrial control (PLC, servo drive) and aerospace (satellite communication modules) and other fields.
