Block Trimmer is a laboratory tool designed to efficiently remove excess paraffin wax from tissue embedding cassettes before sectioning. It features heated, grooved surfaces that allow quick and easy trimming of extra wax, which melts and drains cleanly into a removable catch basin, simplifying wax disposal and preventing messy shavings. By creating a clean and uniform surface on the tissue block, the block trimmer enhances slicing precision in a microtome, improves the quality of tissue sections, and supports a more efficient and orderly workflow in histology and pathology laboratories. The cost of Block Trimmer varies greatly due to factors such as brand, model, functional configuration and sales channel. The unit price is generally around US$400 to US$1,500.

United States market for Block Trimmer is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
