Blockchain-based Service Network (BSN) is a consortium chain technology that provides a public infrastructure network that can be developed, deployed, operated, maintained, interoperated, and able to supervise consortium chain applications at low cost. The high cost of the applied local area network architecture provides developers with a public blockchain resource environment based on the world-wide-web concept, which greatly reduces the deployment, operation, maintenance, interoperability, and regulatory costs of blockchain applications, thereby making blockchain technology widespread.
