Blockchain technology provides a robust platform for implementing decentralized identity (DID) systems, which significantly enhance security and user control compared to traditional centralized identity management methods.

Decentralized Identity (DID) refers to a digital identity that is controlled by the identity holder, rather than a central authority. It uses blockchain to create a secure, immutable, and transparent system where the identity information is stored and managed.

Blockchain serves as the foundational technology for decentralized identities. It allows for the creation of a distributed ledger that no single entity owns or controls. This ledger records all identity transactions (creation, modification, verification) in a secure and tamper-proof manner.

United States market for Blockchain Decentralized Identity is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.

China market for Blockchain Decentralized Identity is estimated to increase from US$ million in 2025 to US$ million by 2032, at a CAGR of % from 2026 through 2032.
