According to this study, the global Blockchain Distributed Ledger market size will reach US\$ 5826.2 million by 2030.

Blockchain distributed ledger is a medium of exchange formed and stored electronically, using encryption methods to regulate the creation of financial units and to verify the transfer of funds. All the blockchain ledgers are created by private individuals, organizations, or firms. The blockchain distributed ledger market has evolved intermittently and at a significant rate during the past few years. The majority of blockchain distributed ledger market is currently focused on cryptocurrencies rather than a more diverse range of applications.

Blockchain data is complete, consistent, timely, accurate, and widely available. Moreover, a third-party cannot interrupt transactions of cryptocurrencies, and thus there is no feasible way to implement a blockchain distributed ledger taxation system. Therefore, the global blockchain distributed ledger market is expected to witness moderate growth in the near future, owing to less transaction cost and reduced chance of thefts. However, limited acceptance and risk of unknown technical flaws are projected to hamper the market growth. Insignificant effect of inflation of blockchain distributed ledger is expected to provide lucrative opportunities to the market.
