The global Blockchain Testing Service market size is predicted to grow from US\$ 1604 million in 2025 to US\$ 5770 million in 2032; it is expected to grow at a CAGR of 16.5% from 2026 to 2032.

Blockchain testing services refer to the comprehensive testing and evaluation of the underlying protocols, smart contracts, application systems, and infrastructure of the blockchain by a third-party professional institution through technical means. The core purpose is to identify vulnerabilities, verify functions, assess performance, and ensure compliance with industry or legal standards. The upstream industry provides computing power, storage, and the underlying code framework, while the downstream applications are for business implementation, system operation, and user interaction.

The future trend of blockchain inspection services will deeply integrate artificial intelligence and automation technologies, transforming from the traditional 'post-audit' to 'real-time monitoring throughout the entire lifecycle'. In particular, through the combination of formal verification and AI large models, it can achieve millisecond-level identification of complex smart contract vulnerabilities, and gradually form a comprehensive inspection system covering cross-chain interaction, privacy computing, and zero-knowledge proof security. The core driving force for market development stems from the increasingly clear global regulatory policies, such as the EU MiCA regulations and the compliance requirements for virtual assets in various countries, forcing project developers to regard inspection as a prerequisite for entry; at the same time, the massive economic losses caused by frequent security incidents in the Web3 ecosystem have compelled decentralized finance and the physical industry (such as supply chain finance) to continuously raise risk prevention thresholds, and the entry of traditional financial supporting services such as insurance and auditing has jointly given

rise to the rigid demand for high-standard and authoritative blockchain inspection services.
