Blood Tumor, also known as hematological disease, is a type of cancer impacting bone marrow, blood, and lymph nodes. Different sorts of mature blood cells include white blood cells for immune protection, platelets for wound clotting, and red blood cells to carry oxygen. In the bone marrow, it originates from progenitor cells and hematopoietic stem. Hematologic malignancies initiate in these cells and are subcategorized as per the type of blood cell that is affected such as myeloid or myelogenous or and lymphocytic lymphoblastic. A malignancy in the lymphoid lineage involves B lymphocytes and T lymphocytes. Malignancy in the myeloid lineage involves precursor cells to white blood cells platelets and red blood cells.
