Blow molding is the process of blowing air into a machine to form the shape of plastic products. The process was invented in the 1800s and popularized in the 1970s. Blow molding machinery is used to produce different plastics, including food and beverage containers (e.g. soda bottles) and personal care containers (e.g. shampoo bottles). There are three types of blow molding machines: extrusion, injection and stretch. Extrusion blow molding machinery The blow molding process begins with melting down the plastic and forming it into a parison or preform. The parison is a tube-like piece of plastic with a hole in one end through which compressed air can pass.

There are lots of opportunities in the injection blow molding machine market. Injection Blow Molding Machine works on a revolutionary form of technology so we can modify

this techniques as per our requirements. Injection Blow Molding Machine can produce a variety of products, so we can use this machine for producing lots of products. We can make this machine in such manner that this can produce multiple products.
