A blower filter is a type of filter used for air purification. A blower, also known as an air blower or fan, is a machine designed to propel air and is employed for industrial and household purposes to circulate and purify air. By passing air through the filter, it can effectively remove foreign particles such as dust and fine particles, delivering clean air.

There are various types of filters designed to capture tiny particles, dust, and impurities in the air. These include particle filters capable of capturing small particles and dust, activated carbon filters that adsorb impurities such as harmful gases and odors, and HEPA filters used in places like hospitals, offering high air purification efficiency. The performance of a filter is determined by factors such as the size of particles it can capture and its adsorption effectiveness, expressed as particle capture efficiency or particle capture rate.
