The global Blue Film Braid Machine market size is predicted to grow from US\$ 92.44 million in 2025 to US\$ 196 million in 2032; it is expected to grow at a CAGR of 11.4% from 2026 to 2032.

In 2025, global sales of Blue Film Braid Machine reached approximately 350 units, with an average global market price of about USD 270,000 per unit. The gross margin of major manufacturers in the industry was approximately 30%-42%.

Blue Film Braid Machine is an automated equipment used in the back-end process of semiconductor packaging and testing. It mainly transfers bare dies, LED chips, wafer-level packaged chips and other products attached to blue film or wafer rings into carrier tape through visual positioning, pick-and-place transfer, inspection, sorting and tape packaging, and finally packages them into reel form. The equipment usually features high-precision pick-and-place, chip orientation correction, appearance inspection, defect rejection and tape-and-reel packaging capabilities. Key performance indicators include compatible wafer size, taping efficiency, pick-and-place accuracy, inspection capability and yield control.

The upstream of Blue Film Braid Machine mainly includes motion control systems, vision inspection systems, precision mechanical structures, nozzle modules, pneumatic components, sensors, carrier tape and cover tape feeding systems, and industrial software. The midstream covers equipment design, assembly, commissioning and process adaptation. Downstream applications mainly include LED optoelectronic devices, wafer-level packaged chips, power RF semiconductors, MEMS sensors and other small semiconductor devices. Its value is mainly reflected in high-speed and high-precision pick-and-place, stable inspection and sorting, low-damage transfer and

compatibility with multiple incoming material specifications.
