Blue Lasers for Industrial are a semiconductor laser with a wavelength of about 450 nm and outputs a spectrum in the blue band. Blue laser diodes are lasers that use semiconductor materials as the working material and use a simple method of injecting current to pump their work. The working principle of the blue semiconductor laser is an excitation method, which uses semiconductor materials (that is, using electrons) to transition between energy bands to emit light. The cleavage surface of the semiconductor crystal is used to form two parallel reflecting mirrors as mirrors to form a resonant cavity to oscillate and feedback light. , generate light radiation amplification, output laser, band 400-500nm.
