Blue Methanol refers to methanol that takes specific steps to reduce or capture carbon dioxide emissions during its production process. This often involves using carbon capture and storage (CCS) technology, or other means to ensure that the CO<sub>2</sub> produced is not emitted into the atmosphere, but is instead utilized or safely stored. This approach aims to make the methanol production process more environmentally friendly and reduce its impact on climate change.

This is similar to grey methanol, but with carbon capture and storage (CCS) technology applied to capture the CO<sub>2</sub> emissions during the production process.

The global Blue Methanol market size is projected to grow from US\$ million in 2024 to US\$ million in 2030; it is expected to grow at a CAGR of % from 2024 to 2030.
