The impact of the latest U.S. tariff measures and the corresponding policy responses from countries worldwide on market competitiveness, regional economic performance, and supply chain configurations will be comprehensively evaluated in this report.

Bluefin tuna is a large and powerful species of tuna, known for its impressive size and speed. It's one of the most prized fish in the world, especially in the sushi and sashimi markets. There are three species of bluefin tuna: the Atlantic bluefin (*Thunnus thynnus*), the Pacific bluefin (*Thunnus orientalis*), and the Southern bluefin (*Thunnus maccoyii*). Bluefin tuna has a short, strong, tapered, elongated body with a cross-shaped tail fin. The color from the bottom to the side of the body is bright, the upper body is dark blue, the fins are dark, the finlets are slightly yellow, and the ridge of the caudal peduncle is black. It has a highly migratory characteristic and likes to group together. It feeds on fish, cephalopods and crustaceans.

As a high-protein, low-fat, and high-quality food rich in Omega-3 fatty acids, bluefin tuna occupies an important position in the global tuna market. Due to its high value and scarcity, the market demand is strong. From the perspective of consumption areas, Japan is the world's largest bluefin tuna consumption market. A large number of farmed bluefins flow to Japan, and the price of fresh bluefin tuna continues to rise. The import volume of the United States has increased year by year. Europe's demand for high-value fresh and frozen tuna continues to increase. The demand for high-value fresh bluefin tuna in other parts of the Asia-Pacific region, including China, Thailand, and South Korea, is also increasing. The world's major bluefin tuna producing areas include the Mediterranean (Spain, Malta, etc.), Japan, Australia, and Mexico. The bluefin tuna

market is highly competitive, and major manufacturers have improved their competitiveness by improving fishing efficiency, optimizing breeding technology, and expanding sales channels. At the same time, due to the scarcity and high value of bluefin tuna, there are certain price fluctuations and trade barriers in the market. Bluefin tuna is close to extinction due to overfishing, and some species are listed as endangered, which limits the catch and increases the uncertainty of market supply. In the future, as the world's awareness of marine ecological environment protection increases, the bluefin tuna industry will pay more attention to sustainable development. This includes adopting more environmentally friendly fishing methods, strengthening marine ecological protection, and promoting the development of a circular economy.
