The global Bluetooth BBQ Thermometer market size is predicted to grow from US$ million in 2025 to US$ million in 2031; it is expected to grow at a CAGR of %from 2025 to 2031.

A Bluetooth BBQ thermometer, often referred to as a wireless BBQ thermometer or a smart meat thermometer, is a kitchen or cooking gadget designed to monitor and measure the temperature of food while it is being cooked on a barbecue or grill. These thermometers utilize Bluetooth technology to connect to a smartphone or tablet, allowing users to remotely monitor the cooking process and receive temperature alerts and updates through a dedicated mobile app.

While Bluetooth provides convenience for short-range monitoring, some manufacturers started integrating Wi-Fi capabilities into BBQ thermometers. This allows users to monitor their grill from anywhere with an internet connection. Integration with smart home ecosystems like Amazon Alexa and Google Home may also become more prevalent, enabling voice-activated control and notifications.
